

SCOUTS | TERRAIN

Release Notes November 2022

The latest release for Scouts | Terrain has just gone live. Here is a rundown of what is included in the release. Not all of these features will be available to all users.

Please Note: you may need to refresh and/or clear your browser cache to access all of these items.

Program Support Leader

- Functionality for Program Support Leaders (Branch, Region, District)
- As a Program Support Leader, I can act as a leader in any section in any group in my role
- As a Program Support Leader, I can search for a specific Group within my Region or District and request access to facilitate the best support
- As a Program Support Leader, I am able to create an event in-system for the Groups that I have read & write access to.
- As a Program Support Leader, I can view the calendars of Groups that I have read-only access to.
- As a Program Support Leader, I can monitor for areas of strength/ deficiency/weakness so that I can facilitate the best support
- As a Program Support Leader, I will receive notifications regarding the status of my access requests
- As a leader with multiple roles, I can provide the support independent of whether it is based in a Scout Group or as a Program Support Leader at differing 'levels' within the system, facilitated through a new & improved Profile Switcher.

Admin Support

- Admin login perspective to replicate user view (support team)
- As a system administrator, I can replicate a user's view so that I can see what they are directly experiencing and provide support in rectifying issues for users. This is enabled through a dedicated System Admin site that allows me to search for a specific user and login as them.
- As a system administrator, I can approve, reject and revoke a Program Support Leader's access request to specific Groups.

The team looks forward to being able to provide you with another update shortly!
